

## Sprint Planning Notes

Team: Team 2

Sprint: 3

Date: 28/9/2021

Attended: Justin John, Daniel Marmion, Mohammed Mousa, Rylan Koneri

Scrum Master: Mohammed Mousa

Product Owner: Dipto

Development team: Justin John, Daniel Marmion, Mohammed Mousa, Rylan Koneri

### 1. Goal

To continue adding more features the Bookeroo application and finish off features started in earlier sprints.

### 2. Duration of the sprint

*2 weeks*

### 3. What is the team's vision for this sprint?

We will complete these user stories in this sprint:

- As a customer, I want to search for a book by its name, so that I can see if a book is available for purchase (#2)
- As a customer, I want to search for books written by an author, so that I can see what books by that author are available for purchase. (#3)
- As a customer, I want to search for a book by its ISBN, so that I can see if a book is available for purchase. (#4)
- As a user, I want to view the cover image of the book I'm looking for so that I can get a first impression of what the book might be about. (#21)
- As a user, I want to view the table of contents of the book I'm looking for so that I can acquire an idea of how long the book might be. (#22)
- As a user, I want to view the table of contents of the book I own so that I can skip to the chapters that sound interesting. (#23)
- As an administrator, I want to login to an administrator account, so that I can add new users (#27)
- As a user, I want to create an account, so that I can purchase books suited to my taste. (#28)

These stories were chosen so that anything that we had started but not yet finished would be done in this sprint, and to add useful features such as creating an account and searching that were not yet present in our product.

#### 4. Estimation in story points

S: 1-2 days	M: 2-3 days	L: 3+ days	XL: 4+ days
-------------	-------------	------------	-------------

2: [m] - Mostly consists of filtering data that can already be readily obtained from the backend

3: [s] - Mostly reuses the effort from #2

4: [s] - Mostly reuses the effort from #2

21: [l] - Needs setup of database and integration between database and frontend, in addition to the creation of a page

22: [s] - Only requires the creation of a simple part of a page

23: [s] - Only requires the creation of a simple part of a page

27: [m] - Requires database integration, but has already been started

27: [l] - Some work has already been done here, but it is a more complex feature which requires significant integration between the frontend and backend
