

Sprint Planning Notes

Team: Team 2

Sprint: 4

Date: 11/10/2021

Attended: Justin John, Daniel Marmion, Mohammed Mousa, Rylan Koneri

Scrum Master: Mohammed Mousa

Product Owner: Dipto

Development team: Justin John, Daniel Marmion, Mohammed Mousa, Rylan Koneri

1. Goal

To finish off adding the rest of features planned for the Bookeroo application and complete refactoring of all code.

2. Duration of the sprint

2 weeks

3. What is the team's vision for this sprint?

We will complete the final user stories in this sprint:

- As a user, I want to view the cover image of the book I'm looking for so that I can get a first impression of what the book might be about. (#21)
- As a user, I want to view the table of contents of the book I'm looking for so that I can acquire an idea of how long the book might be. (#22)
- As a user, I want to view the table of contents of the book I own so that I can skip to the chapters that sound interesting. (#23)
- As an administrator, I want to login to an administrator account, so that I can add new users (#27)

These final stories that were chosen last sprint will be finalised in this sprint and be present in our final product. Refactoring will also be completed on all code that has been implemented to ensure a high quality standard within the design of the final application.

4. Estimation in story points

S: 1-2 days	M: 2-3 days	L: 3+ days	XL: 4+ days
-------------	-------------	------------	-------------

21: [l] - Needs setup of database and integration between database and frontend, in addition to the creation of a page

22: [s] - Only requires the creation of a simple part of a page

23: [s] - Only requires the creation of a simple part of a page

27: [m] - Some work has already been done here, but it is a more complex feature which requires significant integration between the frontend and backend
